

April 25, 2013

Steve Groseclose  
GLOBALFOUNDRIES U.S. Inc.  
400 Stone Break Rd  
Malta, NY 12020

Dear Steve:

National Grid has been advised of the proposed gas and electric requirements for Fab 8.2 located at 400 Stone Break Rd Malta NY. It is our understanding that National Grid has enough gas capacity to serve the projected gas load of 401,692 CFH for Fab 8.2 once the Global Gas Transmission pipeline is completed. The expected completion date is September 2013.

National Grid is reviewing the proposed electric site load of 273 MW that includes Fab 8.2, and it appears that we will be able to meet the electric power requirements, but may need to make some additional system reinforcements depending on the timing of growth in the surrounding area.

Should you have any questions please do not hesitate to contact me.

Sincerely;

John J Murphy C.E.M.
